Bibliographies in the Quick Bibliography Series of the National Agricultural Library, are intended primarily for current awareness, and as the title of the series implies, are not indepth exhaustive bibliographies on any given subject. However, the citations are a substantial resource for recent investigations on a given topic. They also serve the purpose of bringing the literature of agriculture to the interested user who, in many cases, could not access it by any other means. The bibliographies are derived from computerized on-line searches of the AGRICOLA data base. Timeliness of topic and evidence of extensive interest are the selection criteria.

The author/searcher determines the purpose, length, and search strategy of the Quick Bibliography. Information regarding these is available upon request from the author/searcher.

Copies of this bibliography may be made or used for distribution without prior approval. The inclusion or omission of a particular publication or citation may not be construed as endorsement or disapproval.

To request a copy of a bibliography in this series, send the title, series number and self-addressed gummed label to:

Extract: The decision to convert noncropland to cropland has been shown to be sensitive to changes in the levels of conversion costs, yields, and production costs. Thus, regional studies such as those examined here may be needed to predict accurately the rate of conversion and the implications for society. Agricultural and environmental agency decision makers must examine closely the incentive system now influencing the individualfarmer and determine its implications for regional,

national, and world communities.

Cropland quality and landownership in Oklahoma.
Lee, L.K. Stillwater, Okla. : The Station. Oklahoma current farm economics - Oklahoma, Agricultural Experiment Station. Dec 1982. v. 55 (4). p. 9-13. Includes 6 references. (NAL Call No.: 100 OK4 (5)).
Extract: The analysis of ownership patterns on prime and erosion prone cropland can indicate the distribution of cropland quality among landowners. If prime or erosive cropland is concentrated among particular groups of landowners, this information could be useful in developing public policies to protect U.S. cropland. Recent data from a merger of a USDA Landownership Survey and the National Resource Inventories conducted by the Soil Conservation Service allow a profile of rural Oklahoma landowners to be developed. From these profile data, current landownership patterns can be related to land quality. The purpose of this paper is to present and discuss highlights of the profile data so that public policy issues relating to cropland quality can be better addressed.

Design of programs using transferable development rights to preserve farmland in the Northeast.
Mabbs-Zeno, C.C. Amherst, The Council. Journal - Northeastern Agricultural Economics Council. Oct 1981. v. 10 (2). p. 57-62. 10 ref. (NAL Call No.: HD1773.A2N6).
Extract: Approximately 23 Transfer Development Rights (TDR) programs have been implemented nationally, the precise number depending on the definition of TDR used. Sixteen of these are in the Northeast. Even though some of these programs apparently satisfy their designers, almost no rights have been transferred after the programs were in place. This paper reviews the experience gained in programs based on transfer of development rights and attempts to identify ways to make such programs more effective. The method of analysis focuses on program designs in trying to relate specific features of design to alleviation of the various problems associated with farmland conversion.

The effects of suburbanization on agriculture.
Lopez, R.A. ; Adelaja, A.O.-Andrews, M.S. Ames, Iowa : American Agricultural Economics Association. American journal of agricultural economics. May 1988. v. 70 (2). p. 346-358. Includes references. (NAL Call No.: DNAL 280.8 J822).
Abstract: This article conceptualizes the effects of suburban population density and land speculation on agricultural production choices, prices, and profits. A dual profit function model and a system of reduced-form price equations are used to estimate these effects for New Jersey. Results show that vegetable production is the only subsector to benefit from suburbanization, while livestock is the most adversely affected. Suburbanization reduces responsiveness to agricultural prices and discourages captial and land use. The overall impact on profits is positive when capital gains on land are included. Policy implications for farmland preservation and "right to farm" legislation are discussed.

Emerging rights in agricultural land.
Braden, J.B. Urbana, Ill., The Department. Illinois agricultural economics staff paper, series E agricultural economics - Dept. of Agricultural Economics, University of Illinois. May 1980. May 1980. (E-117). 30 p. 45 ref. (NAL Call No.: 916937(AGE)).

0044
Estimating the progressivity of farm tax credits for alternative circuit-breaker formulas.
Johnson, M.B. ; Wirth, C.E. Madison, The Department. Agricultural economics staff paper - University of Wisconsin, Department of Agricultural Economics. May 1979. May 1979. (162). 14 p. 10 ref. (NAL Call No.: HD1401.W57).
Extract: Michigan and Wisconsin recently instituted farmland preservation programs that offer farmers property tax relief in exchange for development rights agreements. Both states base their tax relief schemes on the circuit-breaker principle, but use different formulas. Income and property tax data for a sample of Wisconsin farmers are used to compare the impacts of the two formulas on the progressivity of the property tax for farmers. Although the Wisconsin formula does a better job of concentrating relief on low income farmers, the more generous Michigan program reduces farm property tax regressivity more.

Extract: A 1982 survey of Alabama

farmers and landowners sought opinions about protecting agricultural land from conversion to urban and industrial uses. Farmers recognized the seriousness of the problem, supported regulatory action, and felt there was a general feeling of responsibility toward society on the part of landowners. Current use-value assessment was the only one of seven specific farmland protection strategies that received clear acceptance. Attitudinal dimensions, farm characteristics, and personal attributes were used to predict support for specific strategies. Respondents' overall orientation toward government involvement in farmland protection was the best predictor of the various approaches. Younger farmers tended to be more amenable to protection measures. Older landowners and landowners with higher incomes were less favorable toward government involvement in the land market.

Extract: Agricultural land provides a variety of "nonmarket" services to the Commonwealth, including wildlife habitat, scenic vistas, and recreation. This study utilizes an iterative bidding game to estimate willingness-to-pay of residents of three central Massachusetts counties to preserve state agricultural land. Through the use of these data, estimates of the value of these nonmarket amenities are derived so that a fuller measure of the value of agricultural land can be obtained.

Extract: From the social policy view, a revision of land valuation policies toward relatively more favorable rates on higher quality lands not only conforms with basic conservation principles but also helps resolve the incongruity between farmland preservation as a policy goal and the often contradictory results of tax assessment practices. These findings suggest a revived and revised role for differential assessment as a means of promoting a more orderly transition in the conversion of farmland and as a more formidable means of conserving prime lands in competition with urban land use.

Abstract: A total of 21 papers are presented by experts on current food politics, issues, and policy for food administrators, agricultural lawyers and decision-makers in the food production and supply areas. Major emphasis is placed on agricultural policy changes relative to US political institutions (11 papers) and on new agency issues (10 papers). Discussion topics under agricultural policy changes include: food pricing policy, the 1977 farm bill, politics of the agricultural research establishment, commodities exchanges, and consumer organizations. Discussions of new agenda items covers: food stamps, collective bargaining, farmland preservation, water demands, and social research vs. public policy. (wz)

Extract: In 1970 Washington enacted the Open Space Tax Act to preserve and conserve agricultural and open space lands through a differential assessment program. Low participation in the program produced extensive amendments to the law in 1973. Current-use assessments are based upon the capitalized, earning capacity of the property. Eligibility criteria include parcel size, land use, and agricultural income requirements in some cases. Rural land must be enrolled in the program for a minimum of ten years. Withdrawal from the program results in a rollback tax plus interest. Without proper notification, withdrawal can also result in an additional penalty equal to 20 percent of the rollback tax.

Extract: In this paper we consider some of the more important questions associated with the preservation of land for farming and other rural uses. First, we detail more carefully the effects of urban expansion on farming and other rural activities. Second, we address, from a national and regional perspective, the question, Why preserve farmland? and review some of the state and local approaches to farmland preservation. Finally, we consider a central question in rural land preservation: Who pays? Is the cost of preservation largely assumed by the public or the private sector?

Extract: A conference on Protecting and Preserving Rural Land Use in Virginia produced twelve papers, ten devoted to land-use policy and two to water policy. For the proceedings, the papers are presented in four subsets: land-use issues, case studies and methods, and water policy. The available supply of cropland, the impact of an expanding metropolis on an urban-fringe locality, and the way changes in culture impact land are discussed as issues. The case studies examine the transferable development rights program of Calvert County, Maryland; the development rights purchase program of Suffolk County, New York; and the development of differential taxation and tax-relief programs by states. Among the methods examined are zoning, transferable development rights, purchases of development rights, and timing and placement of utilities. The problems of changing water law from the Riparian

Rights Doctrine to an alternative system and of implementing areawide water quality programs are discussed.

Extract: The mixture of positive and normative questions in issues related to protection of agricultural land from urban encroachment requires analysis from an institutionalist perspective. The role of agrarian myths in American culture demonstrates that protection of agricultural land is related to national identity. Distributional impacts of a national agricultural lands policy as well as implications for the future economic development of the South are considered.

Extract: One fairly controversial reason given for public intervention is the need to protect the environmental amenities provided to the public by privately held prime land. Two questions which are central to this controversy are addressed in this paper: (1) Are there conceptual reasons for suspecting that private land markets fail to adequately consider the environmental amenities provided by prime land?; and, (2) Are the environmental amenities provided by prime land a relatively large and therefore important benefit of prime land retention?

Extract: The 1972 adoption of rural zoning in Madison County occurred at a time when only a few Nebraska counties had enacted zoning regulations. It resulted from the County Commissioners' desire to restrict the building of residential housing in the farming areas and thus avoid the high costs of providing services to these scattered homes. Subsequently the concept of protecting agricultural land became an important consideration. For those considering the adoption of rural zoning, the Madison County experience provides an example of the political and administrative realities of local land use regulation.

Social security taxation: impacts on farm operations and proposals for tax reform.
Jeremias, R.A. ; Durst, R.L. Washington, D.C. : The Service. ERS staff report - United States Dept. of Agriculture, Economic Research Service. Available from NTIS, order no. PB85-134419. Nov 1984. (AGES840723). 42 p. Includes 20 references. (NAL Call No.: DNAL AGE 916762(AGE)).
Extract: Recent reforms have increased the social security tax burden on farmers and other self-employed workers. Some farmers are able to reduce their social security taxes by shifting their savings from farm to nonfarm investments, adjusting their use of debt, renting farmland to and from others, changing their hog- and cattle-raising practices, and incorporating their farm businesses. Each of these tax reduction methods can result in a misuse or misallocation of resources. Economic efficiency could be improved by changing the social security tax structure to eliminate existing incentives for the use of these tax-saving but inefficient business practices.

Extract: Agricultural land use rights have become increasingly complex following new policies for soil conservation, nonpoint pollution control, wetlands protection, and farmland preservation. When viewed in a framework that distinguishes between ownership and exchange of rights, little change is evident in ownership of rights. The added complexity has come mainly in the rules governing exchanges. Farmers are confronted increasingly with rules which allow specific rights to be limited by government with compensation. These rules retain the flexibility of individual ownership while reflecting a growing awareness that the general welfare depends on wise use of agricultural land.

Extract: Canada is witnessing a deterioration of soil resources, significant losses in its farmland base and a growing dependence on high energy technology. Although this country has excellent land research capability, preserving agricultural resources is still not a high enough national priority. The author recommends that (1) the findings of land resource research should be used in regional development planning, (2) on-farm and public awareness of issues related to land resource protection should be promoted and (3) funding programs should create incentives for on-farm use of sustainable production practices.

Extract: UCLES is a variant of USDA's LESA (Land Evaluation and Site Assessment) system tailored to Utah's

agricultural situation. It is designed to be fitted to local conditions in each of the state's counties. Our major modifications of the LESA criteria account for irrigation, both in the design of the land evaluation system and through the addition of site assessment questions that evaluate irrigation costs and water supply reliability.
